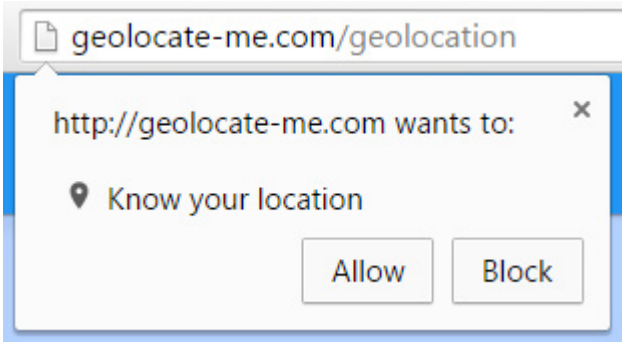
Handle Browser Location Permission Prompts

How to achieve or handle location permission pop-ups in AIQ.



1. Stop test designer
2. Navigate to "\TestDesigner\NetworkProxy\config\Chrome" in your installation.
3. Take backup of the "AllowDownloads.json" file by renaming it.
4. Create a new version of "AllowDownloads.json" file in "\TestDesigner\NetworkProxy\config\Chrome" using the following code:

   AllowDownloads.json

```
{
                        "credentials_enable_service": false,
                        "profile": {
                        "managed_default_content_settings":{
                        "geolocation": 1
                        },
                        "default_content_setting_values": {
                        "automatic_downloads": 1,
                        "geolocation": 1
                        },
                        "default_content_settings":{
                        "popups":0
                        },
                        "cookie_controls_mode": 0
                        },
```

```
        "download": {
        "directory_upgrade": true
        },
        "partition": {
        "default_zoom_level": {
        "x": 0
        }
        },
        "devtools": {
        "preferences": {
        "jsSourceMapsEnabled": "false"
        }
        }
    }
```

5. Start test designer
6. Login to AIQ and launch your script in playback mode in Chrome.
