# Find What Is Using an AIQ Port

What Operating System are you using?

I have a Mac

I have Windows

# Mac

1. Open **Terminal**
2. Enter the following command, where 8443 represents the port you wish to check:
   ```
   lsof -i :8443
   ```
3. Any resources actively using the specified port display along with the PID (Process ID)
4. If you wish to kill (stop) the resource, enter the following command, where 12345 represents the PID to terminate:
   ```
   sudo kill 12345
   ```

# Windows

1. Open the Command Prompt
   Click Start, enter cmd and select Command Prompt
2. Enter the following command, where 8443 represents the port you which to check:
   ```
   echo off & (for /f "tokens=5" %a in ('netstat -aon ^| findstr 8443') do tasklist /NH /FI "P
   ```
3. Note the process ID and/or application using the specified port

4. If you wish to stop the resource actively using the specified port
    1. Open the **Task Manager**
       Click **Start**, enter **task** and select **Task Manager**

    2. Select the **Processes** tab

    3. Ensure the PID column is visible
       Right-click any column header, and click **PID**

    4. Click the **PID** column to sort by Process ID

    5. Locate the process ID noted above, right-click and select **End Task**
       If you do not see the process ID of interest, check **Show processes from all users**
