

Legacy App Pen Scenario Creation Reference

Last reviewed: October 2, 2026

This page is retained as a legacy reference for older Appvance Designer Script 3.0 App Pen scenario workflows.

What changed in this article

- Corrected the title grammar and marked Appvance Designer Script 3.0 content as legacy.
- Replaced current-action wording with guidance to use Scenario Editor for new work where possible.
- Added checks for customer dependency, migration path, scenario ownership, and whether screenshots/data still match the old workflow.

Validation workflow

1. Confirm the workflow still depends on Appvance Designer Script 3.0 before following this page.
2. Prefer Scenario Editor for new scenario creation and document any blocker that requires legacy App Pen steps.
3. Validate the resulting scenario in the current AIQ environment before reusing it.

Review note: This page is a legacy bridge, not recommended setup guidance for new scenarios.
