

Legacy LoadRunner Download Reference

Last reviewed: September 29, 2026

This page is retained as a legacy reference for locating and preparing LoadRunner software in environments that still depend on it.

What changed in this article

- Marked the download instructions as legacy because LoadRunner availability, licensing, and vendor download paths can change.
- Added checks for license ownership, version compatibility, installer source, checksum/security review, and supported operating system.
- Added a warning not to download installers from unapproved third-party locations.

Validation workflow

1. Confirm the approved LoadRunner version and license with the customer or tool owner.
2. Use the vendor-approved download path and validate the installer before use.
3. Record version and install location before configuring AIQ integration.

Review note: This page now avoids hard-coding stale vendor download guidance.
