

Legacy LoadRunner Integration Overview

Last reviewed: September 29, 2026

Use this overview only when an AIQ environment still needs to reference LoadRunner integration concepts or migration details.

What changed in this article

- Marked the broad Load Runner page as legacy overview content.
- Connected the overview to the separate LoadRunner script creation, download, admin, and execution pages instead of duplicating steps.
- Added decision guidance for when to keep LoadRunner support versus migrate to AIQ-native or JMeter-based workflows.

Validation workflow

1. Confirm why LoadRunner is still required for the environment.
2. Identify whether the work involves script creation, software download, admin configuration, or execution.
3. Route the user to the specific LoadRunner page and document any migration plan.

Review note: This page now acts as an overview/router instead of a generic placeholder.
