

GENI Pricing & Availability

GENI Script Generation is licensed **per application**, with coverage starting at as few as **10 applications**. Both on-premises and cloud deployments are supported.

Availability

- GENI Script Generation is available in **AIQ 5.3.6 (build 536)** and later.
- Requires an active **GENI license** on the AIQ account. The licensed entry point signs you directly into the GENI UI.
- The **GENI Transformation Factory** (GTF) is available from AIQ release **5.3.1** onward, as a separate capability.

Deployment model

- GENI Script Generation is a **hosted service managed by Appvance** (on-prem installation is available as an additional add-on).
- To reach the application under test, the customer whitelists a **single outbound IP address** for the GENI service.
- Generated scripts are **downloadable** (Playwright / Java / JavaScript) and editable, for portability into any pipeline.

Pricing model

Item	Details
Licensing	Per-application basis
Minimum	Coverage starting with as few as 10 applications
Deployment	On-premises and cloud
Speed	Converts English test cases to test scripts in bulk at 100 scripts per hour ; authors and maintains scripts 400x faster than humans

Admin & user management

- GENI Script Generation is enabled with a **single license update to your controller**.
- Appvance will request **one user email address** to create an **ADMIN account** for GENI.
- This ADMIN user can **add and manage the users** who are permitted to draw on the credits available to your account, and can **grant or revoke user access** as needed.

Credits are held in one shared pool of test cases for the entire organization. At this time, usage cannot be limited on a per-user basis, so it is important that the ADMIN monitors usage across your team.

Note: the GENI Transformation Factory (GTF) — a separate, related capability — is available after **Release 5.3.1** of Appvance IQ. See the [GENI Transformation Factory](#) chapter.
