

Play Page Overview

Recommended guidance

Use the Play Page to review and manage AIQ executions, recent runs, and result evidence. The page is useful for confirming whether a run started, completed, failed, or produced output that requires deeper troubleshooting.

What to review

- Execution status, start time, duration, scenario or suite name, and owner.
- Output Logs, screenshots, reports, service responses, and error details.
- Test Node, browser, data source, and environment used by the run.
- Whether the failure is scenario logic, application behavior, environment, data, or platform related.

Recommended workflow

1. Open the run from the Play Page and confirm the exact execution being reviewed.
2. Check the first meaningful error before reviewing later cascading failures.
3. Compare current results with the most recent known-good run.
4. Attach clear evidence when escalating and avoid sharing secrets from logs.
