

Use the Analyze Page

Use the Analyze Page

The Analyze page helps review execution results and identify where a scenario, service, or performance run needs attention. Use it after a test completes, or while reviewing a run that produced unexpected behavior.

What to review

- Overall pass/fail status and error patterns.
- Step-level timing, failures, and repeated symptoms.
- Environment or data issues that affected the run.
- Evidence needed for follow-up, such as output details, screenshots, or logs.

Recommended workflow

1. Open the completed execution from the appropriate results or controller area.
2. Use Analyze to narrow the failure to a scenario step, service call, data issue, or environment condition.
3. Compare the failed run with a known good run when available.
4. Record the finding in the related defect, ticket, or test-maintenance note.

For Scenario Editor tests, start by checking the failed step and its test data before changing the scenario.
