Web Testing with AIQ

Contents

- Web Designer (new in AIQ 5.0)
- Web Designer (Classic)
- Instant Replay
- JS Edit & Play for Web Testing
- SmartTag Workbench
- Network Workbench
- Validation Workbench
- Visual Accessors for Web Testing
- Global JSON File
- Comparing PDF Files

AIQ provides functional, load & performance, and security testing for web apps and websites.

AIQ enables you to test websites and web apps, from UI to API, as part of your continuous testing program. Launch a complete set of functional tests (integration, smoke, and regression tests) as well as performance and app pen tests using the same test assets developed in any of AIQ's test creation modules—AISG, Test Designer, Automatic Regression Testing, and Services Workbench.

Leverage the most complete solution for guaranteed quality. Move fast, release confidently.

AIQ enables you to meet all your end-to-end web testing needs whether you need functional, integration, performance, load, or security testing capabilities. Test cross-browser compatibility easily in multi-browser execution scenarios or test website appearance on mobile platforms.

Support use cases like uploading files, validating CSS, testing drag & drop actions, or an array of other complex functions. You can even use scripts you may have written in other languages or frameworks, for maximum flexibility.

- Chrome, Firefox, Safari and Edge
- HTML5, AngularJS, REACT, AJAX
- Use tests developed in Web Designer or via AISG
- Execute tests in your CI/CD pipeline

- Functional, performance and security testing
- Support for running scripts created in other languages and frameworks

Capture self-healing tests for use with advanced, complex, modern web technologies using AIQ's codeless Web Test Designer. Test your sites with AI-generated tests via the exploratory AISG or Automatic Regression tests. Employ both UX and API testing and timings. Reproduce issues for easy resolution using our Instant Replay technology. Get accurate results with implicit wait times built in.

Run tests that reflect the way your users behave.

AIQ supports dynamic web apps and sites, assuring reliability and effectiveness so you can keep your business secure. Data-driven testing validates your key transactional processes.

Currently, there are two web testing interfaces:

- Web Designer (new in AIQ 5.0)
- Web Designer (Classic)
