

Getting Started with iOS Testing in AIQ

Last reviewed: September 22, 2026

Use this page as a starting point for validating iOS workflows with AIQ mobile testing capabilities.

Recommended guidance

- Confirm supported iOS versions, devices, simulators, and drivers for your AIQ version.
- Prepare certificates, provisioning, device trust, and network access before recording or execution.
- Separate mobile setup issues from application-under-test defects.

Validation workflow

1. Review the current AIQ mobile testing prerequisites.
2. Prepare the iOS device or simulator and verify it is reachable from the test node.
3. Install or configure the application under test using the approved method.
4. Run a small smoke scenario before building broader coverage.
5. Capture device logs and screenshots for troubleshooting.

Note: Mobile tooling changes frequently; validate this page against the current AIQ release notes during future reviews.
