

Admin Options in AIQ

Last reviewed: September 22, 2026

Admin Options contains administrative controls for users, environment configuration, and operational settings. Changes here can affect many AIQ users.

Recommended guidance

- Limit access to administrators who understand the environment impact.
- Document changes that affect users, integrations, or execution behavior.
- Use change windows for high-impact settings.

Validation workflow

1. Identify the setting and the reason for the change.
2. Check current value and capture a rollback plan.
3. Update the setting in Admin Options or the supported configuration path.
4. Validate sign-in, permissions, integrations, or execution behavior as applicable.
5. Record the change in the operations log.

Note: Do not use Admin Options to work around access-control process requirements.
