Check AIQ Test Node Status

Last reviewed: September 30, 2026

Use this article to verify whether AIQ Test Nodes are online, healthy, and ready to execute scenarios.

What changed in this article

- Shortened the title and aligned it with AIQ Test Node terminology.
- Added checks for online status, assigned capacity, browser/runtime availability, recent heartbeat, node logs, and execution queue symptoms.
- Added troubleshooting guidance for distinguishing node availability from scenario-level failures.

Validation workflow

1. Check the Test Node list or admin view for online/offline status and recent heartbeat.
2. Confirm the node has the required browser, runtime, network access, and capacity for the target execution.
3. If a run fails, compare node logs and queue status before changing the scenario itself.

Review note: This page now gives a health-check workflow instead of only pointing at a UI location.
