Configure Dynatrace Integration for AIQ Monitoring

Configure Dynatrace Integration for AIQ Monitoring

Use this page when AIQ test results need to be correlated with Dynatrace metrics and traces. Coordinate tenant access with the monitoring owner.

When to use this guidance

- Dynatrace monitors the system under test.
- AIQ performance results need APM context.
- You need to validate token scope, entity selection, and time correlation.

Recommended approach

1. Confirm the Dynatrace tenant URL and target entities or management zones.
2. Create an approved API token with the minimum required read scope.
3. Configure AIQ with the Dynatrace endpoint and token according to the current version.
4. Run a short AIQ test and compare the execution time window with Dynatrace data.
5. Use consistent tags or test names to make executions easy to find.

Note: Protect Dynatrace tokens as secrets and rotate them according to policy.
