Configure New Relic Integration for AIQ Monitoring

Configure New Relic Integration for AIQ Monitoring

Use this page when AIQ executions need to be reviewed alongside New Relic APM or infrastructure metrics.

When to use this guidance

- New Relic monitors the application or infrastructure under test.
- AIQ reports need supporting APM evidence.
- You need to validate access, timing, and dashboard references.

Recommended approach

1. Confirm the New Relic account, application, dashboard, and metric scope.
2. Create or select an approved key or account access method with least privilege.
3. Configure the AIQ integration or global option for New Relic according to your version.
4. Run a short validation execution and verify metrics appear for the same time window.
5. Document dashboard links or metric names used for performance analysis.

Note: Never paste New Relic keys or account secrets into documentation pages or test output.
