

Configure SAML Options in AIQ

Last reviewed: September 24, 2026

SAML options connect AIQ authentication to an identity provider for single sign-on.

Recommended guidance

- Coordinate changes with the identity-provider owner before updating SAML metadata.
- Keep a verified administrator fallback path before enabling or changing SSO.
- Track certificate expiration dates and renew them before users are impacted.

Validation workflow

1. Collect IdP metadata, entity ID, ACS URL, and certificate details.
2. Enter or update the SAML settings in AIQ.
3. Test login with a limited user group before broad rollout.

Note: Changing SAML can affect user access. Confirm a fallback admin account before saving production SSO changes.
