

Creating a SVN Repository

1. Fill in All the fields, Name of the Repository, can be any name that should be unique, a new configuration with the same name will override any previous configuration
2. Select Type to be SVN. Provide a valid User-name and Password. Provide the entry point URL and click Accept button for the repository to be configured successfully

The screenshot shows a web interface for creating a repository. At the top, there's a navigation bar with tabs: 'Repository' (active), 'Reports', 'APM Integration', 'Git Credentials', 'EC2 Credentials', and 'AIQ Credentials'. Below the navigation bar, there's a 'Select' dropdown menu, a 'Refresh' button, and a 'Last updated (yyyy-MM-dd):' label. To the right of these are buttons for 'Pull', 'Upload', 'Checkout', and 'Clone'. The main form area has several sections. The first section contains a 'Type' dropdown menu set to 'SVN', a 'Name (Case insensitive)' text input field, and a 'Branch:' text input field. To the right of these are buttons for 'Explore', 'Delete', and 'Clear'. The second section contains a 'URL' text input field, a 'Visibility' dropdown menu set to 'Private', a 'Username' text input field, and a 'Password' text input field. The third section contains a 'Default Commit Message' text input field and a 'Status:' text input field. The fourth section contains a 'Stacktrace:' text input field.

3. Similarly, any number of Repositories can be created, all the created repositories shall be displayed under the 'Select Repository' drop-down
4. Clicking on the Clear button will clear the current repository information that was made in the UI and to delete any repository user has to select the Repository from the drop-down and click the 'Delete' button
