

Features and Benefits of Selenium

AIQ integrates Selenium to provide the following features and benefits:

- AIQ re-purposes a single Selenium test as a functional test, load test, and performance test.
- Scale up your Selenium tests to operate in your QA lab, in the Appvance On-demand Cloud Test Environment, or both!
- AIQ data-enables Selenium tests for test-driven development.
- Dramatically reduce test operating costs. AIQ efficiently operates multiple Selenium tests in a grid concurrently.
- AIQ runs Selenium tests for browser compatibility testing of your Web application.
- Produce actionable knowledge by analyzing the results into 350 or more performance and functional charts.
- Transform Selenium tests into Java unit tests for additional features: looping, variables, conditionals
- Run At User Levels Never Before Possible - Building a test lab used to be prohibitively costly for medium and large-scale load tests. Cloud computing delivers bandwidth and computing power to achieve tests in the millions-of-users levels at commodity prices.
