

Install Glassbox on an AIQ Test Node

Recommended guidance

Install Glassbox on an AIQ Test Node only when the integration is approved for the target environment and the Test Node owner understands the performance, privacy, and monitoring impact. Coordinate installation with application, security, and observability teams.

Before installation

- Confirm the Glassbox version, AIQ version, Test Node operating system, browser version, and application scope.
- Validate network access, certificates, proxy settings, and endpoint security policy.
- Confirm what data Glassbox captures and whether masking is required.
- Back up current Test Node configuration before making changes.

Post-install validation

1. Restart only the required services or host components.
2. Run a small Scenario Editor smoke test.
3. Confirm Glassbox captures expected sessions without exposing sensitive data.
4. Monitor Test Node CPU, memory, browser stability, and execution time after installation.
