

Legacy Glassbox Installation Reference

Last reviewed: September 25, 2026

This page is retained as a legacy reference for environments that still require Glassbox integration or installation notes.

What changed in this article

- Marked Glassbox installation as legacy/environment-specific unless a current customer deployment still depends on it.
- Added validation steps around version compatibility, required access, and post-install evidence.
- Avoided presenting Glassbox installation as a default AIQ integration path.

Validation workflow

1. Confirm the customer still uses Glassbox and identify the required version.
2. Validate prerequisites and access with the Glassbox owner before installation work.
3. After installation, run a small validation flow and capture evidence that AIQ and Glassbox data align.

Review note: Flagged the article as legacy to prevent it from being treated as standard integration guidance.
