Legacy Hudson Integration Reference

Legacy Hudson Integration Reference

Hudson integration content is retained only as a legacy reference. New CI/CD work should use current Jenkins, GitHub Actions, or supported command-line/API integrations.

When to use this guidance

- You are maintaining an old environment that still references Hudson.
- You need to migrate historical CI jobs to a supported CI/CD tool.
- You are deciding whether to archive or consolidate older integration content.

Recommended approach

1. Inventory any Hudson jobs that still trigger AIQ tests.
2. Capture job parameters, credentials, triggers, and report locations.
3. Recreate the workflow in a supported CI/CD platform.
4. Validate the migrated job with a small AIQ execution.
5. Mark Hudson-specific instructions as legacy or remove them when no longer needed.

Note: Hudson is obsolete for current AIQ documentation. Prefer Jenkins or another supported CI/CD platform.
