

Legacy Selenium IDE Import Reference

Last reviewed: September 28, 2026

Use this article only when a team still needs to understand older Selenium IDE assets in relation to AIQ.

What changed in this article

- Marked Selenium IDE guidance as legacy because current AIQ work should prefer Scenario Editor, supported Selenium/TestNG flows, or maintained automation code.
- Removed the implication that Selenium IDE is a primary authoring workflow.
- Added checks for export format, browser compatibility, locator quality, and whether the script should be rebuilt in Scenario Editor instead.

Validation workflow

1. Confirm whether the Selenium IDE artifact is still needed or can be rebuilt in Scenario Editor.
2. Validate exported commands and locators before importing or translating them.
3. Run a small playback and review failures caused by outdated Selenium IDE commands.

Review note: This page now positions Selenium IDE as migration/reference content, not recommended new automation authoring.
