Required File Changes for AIQ Integrations

1. Update build files as needed
   Only a few files require an update for a given environment
   Search the following build files for "replace_"
   - build.xml
   - consoleDetails.json
   - controller.json
   - ec2.creds
   - githttp.json
   - jiraCreds.json

   The documentation below also contains "replace_" where helpful documentation can be updated
2. Retrieve files locally to run a pipeline from the terminal
   git clone https://<replace_gitRepoURL>.git
   cd -clonedRepoName-
   git checkout -yourBranch-
   git pull
3. Ant Calls to Run Pipeline

   Ant calls must be run from the root of the cloned git repository (i.e. where the build.xml file resides)

   Execution Variables

   NOTE: When referencing variables from a terminal, you must prefix each variable with -D
   Product Variable examples
   -Dproduct=<replace_productName>
   Project Variable examples (Test Name)
   -DprojectName=<replace_productName> -DprojectName=<replace_productName>
   AI Template Specific Variables
   -Dtemplate is relative path, file (with extension) to template
   -Dtemplate=<replace_path>/ai/templates/<replace_templateName>.abpt
   Scenario Specific Variables
   -Ddir is a directory or path where the scenario resides or will reside (if generated)
   -Dscenario is the scenario file name and extension
   Example AI Runs:

ant blueprintDashboard -Dtemplate=ipts/ai/templates/<replace_templateName>.abpt -Dproduct=<replace_productName> -DprojectName=<replace_projectName> -DminPages=<replace_#> -DminActions=<replace_#>

Other helpful / optional parameters (These parameters override default values in build.xml):
maxFailingRequests="-1"
minValidationRatio="-1"
maxValidationFailures="1"
minPages=20
minActions=20

Example Scenario Runs:
ant createScenariosDashboard -Ddir=<replace_path>/scenarios -Dscenario=aiGenerated.scenario -Dproduct=<replace_productName> -DprojectName=<replace_projectName>
ant createScenariosDashboard -Ddir=<replace_path>/scenarios -Dscenario=<replace_scenarioName>.scenario -Dproduct=<replace_productName> -DprojectName=<replace_projectName>
Example AI + Script Gen
ant generateRegressionScenario -Dtemplate=<replace_path>/ai/templates/templateName.abpt -Dproduct=<replace_productName> -DprojectName=<replace_projectName>
also, see parameters from "Example AI Runs"

4. Dashboard URL
   Dashboards publish at https://<replace_bucketDomain>/products/main.html

   To learn more about Dashboards, see CICD - Dashboards
