

Module: AISG

Method	Paramters	HTTP Method	Description	URL Example
addFile	String username, String blueprintType, String path		Adds external file	
compareBlueprints	String username, String baselinePath, String blueprintPath, int execution		Compare Blueprints	
createBlueprint	String username, String fields		Creates Web Blueprint with user parameters	
createBlueprintFromTemplate	String username, String template		Creates Blueprint from Template file	
createBlueprintFromTemplateUI	String username, String templateFile		Creates Blueprint from Template file	
createBlueprintFromTemplateWithDataset	String username, String template, String dataset		Creates Blueprint from Template file after replacing with selected Dataset	
createExecution	String username, String fields		Creates Execution	
createJsonValidationReportCICD	String username		Downloads Json Validations Report file for CI/CD	
createMobileBlueprint	Creates Mobile Blueprint		Creates Mobile Blueprint	
createRequestTXTFile	String username, int status		Downloads Requests Report file for the Execution	
createResponseTimeReport	String username		Downloads Response Times Report file for the Execution	
createResponseTimeReportCICD	String username, int code		Downloads Response Times Report file for CI/CD	

createSmartTagsReport	String username		Downloads SmartTags Report file for the Execution	
createSmokeTestReport	String username		Downloads Smoke Test Report file for the Execution	
createValidationReportCICD	String username		Downloads Validations Report file for CI/CD	
createValidationsBP	String username		Create validations with a Blueprint	
createValidationsReport	String username		Downloads Validations Report file for the Execution	
deleteFile	String username, String blueprintType, String fileName		Deletes file	
deleteSets	String username, String name		Deletes selected Dataset	
downloadBlueprint	String username		Downloads Blueprint file	
downloadBlueprintActions	String username, int executionId, String fileType		Downloads Blueprint Scripts	
downloadCustomActions	String username, int executionId, int stateId, String type		Downloads Custom Actions for the Execution	
downloadFailedActions	String username, int executionId		Downloads Failed Actions for the Execution	
downloadFailedInconsistentActionsReport	String username, int executionId, String type		Downloads Failed and Inconsistent Actions Report file for the Execution	
downloadFile	String username, String blueprintType, String fileName		Downloads external file	
downloadInconsistentActions	String username, int executionId		Downloads Inconsistent Actions for the Execution	
downloadMobileConfiguration	String username		Downloads Mobile Configuration file	

downloadMobileConfigurationTemplate	String username, String platform, String service, String device		Downloads Mobile Configuration Template file	
downloadRequestActions	String username, String type, String actionIds		Downloads Scripts for the Request	
downloadValidationsActions	String username, int executionId, String urlId, int id, String fileType, String type		Downloads Scripts for failed Validations	
exportDataSets	String username, String path, String commitMessage		Exports Dataset Names from Blueprint Template	
exportDataSetsCSV	String username, String path, String commitMessage		Exports Dataset Names from Blueprint Template	
exportSelfHealedSmartTagsLibrary	String username, String path, String commitMessage		Write SmartTags Library to user defined file	
exportSmartTagsLibrary	String username, String path, String commitMessage		Write SmartTags Library to user defined file	
exportTemplate	String username, String path, String commitMessage		Exports Blueprint Template	
getAllStatusCodes	String username		Returns Status Codes of Requests	
getBindings	String username, int executionId, int page, String type		Returns Bindings for the Execution	
getBindingsCICD	String username		Returns Bindings for the Execution	
getBlueprintResults	String username		Returns Blueprint Results	
getBlueprintType	String username		Returns Blueprint type	
getCustomActions	String username, int executionId, int statId		Returns Custom Actions for the Binding	
getDataSets	String username		Returns Datasets	
getExecutionIDs	String username		Returns id and name of all Executions	

getFieldVisualHint	String username, int executionId, int stateId, String name, String type		Returns Visual Hint bytes for selected field	
getHTMLSmarttagsCICD	String username, String filter		Downloads SmartTags Report file for the Execution	
getInteractive	String username		Returns Interactive mode	
getMaxBindings	String username, int executionId, String type		Returns Max Bindings for the Execution	
getPagesActionsCICD	String username		Gets the Pages and Actions for the CI CD Dashboard	
getReportDuration	String username		Returns Request Duration for Response Times Report	
getReportStatusCode	String username		Returns Request Status Code for Smoke Test Report	
getRequestMaxDuration	String username		Returns Request Duration for Response Times Report	
getRequestsWithStatusCode	String username, int status		Returns Requests with Status Code	
getScanDetails	String username		Returns Global and each Execution details	
getScanParameters	String username, String blueprintType		Returns Blueprint initial scan parameters	
getSmartTagHints	String username, String path		Returns Visual Hint bytes	
getSmartTags	String username, int executionId		Returns SmartTags for the Execution	
getSmartTagVisualHint	String username, int executionId, String urlId, String name		Returns Visual Hint bytes for selected SmartTag	
getSource	String username, int executionId, int stateId		Returns Source	

getUseVisualHints	String username		Returns if uses Visual Hints	
getValidations	String username, int executionId		Returns Validations for the Execution	
getValidationsBP	String username		Create validations with a Blueprint	
getValidationsCICD	String username		Gets Validation reports for CI/CD	
getVersion	String username		Returns Blueprint version	
getVisualHint	String username, int executionId, int stateId		Returns Visual Hint bytes	
makeCustomActions Global	String username, int executionId, int caId, boolean global		Moves Custom Actions to stateId or - 1	
openBlueprint	String username, String path		Opens Blueprint	
openTemplate	String username, String path		Opens Blueprint Template	
pauseExecution	String username, int executionId		Pause Executions	
playExecution	String username, int executionId		Play Executions of the blueprint	
playWithBindings	String username, String fields		Play with Bindings	
processBinding	String username, String fields		Creates Custom Actions for the Binding	
processDPL	String username, String filepath		Returns Datasets from dpl file	
removeBlueprint	String username, String blueprintType		Deletes Blueprint	
removeCustomAction	String username, int executionId, int actionId		Removes Custom Action	
retryFailed	String username, int executionId		Reprocess Failed Actions for the Execution	
retryInconsistent	String username, int executionId		Reprocess Inconsistent Actions for the Execution	

saveAsBlueprint	String username, String fields, String commitMessage		Writes to temporary and new user defined files	
saveBlueprint	String username, String fields, String commitMessage		Writes to temporary and user defined files	
saveBlueprintTemplate	String username, String path, String content, String commitMessage		Saves files to Disk	
saveCustomActions	String username, int executionId, int stateId, String type, String path		Saves Custom Actions for the Execution	
saveToServer	String username, String content		Saves Mobile Configuration file	
serverConfig	String username, String path		Returns Mobile Configuration file	
setInteractive	String username, boolean interactive		Changes Interactive mode	
setReportDuration	String username, int milliseconds		Sets Request Duration for Response Times Report	
setReportStatusCode	String username, int status		Sets Request Status Code for Smoke Test Report	
setRequestMaxDuration	String username, int milliseconds		Sets Request maximum Duration for Response Times Report	
stopAllRunnings	String username		Stops Blueprint	
stopByExecId	String username, int executionId		Stops Execution	
updateDataSets	String username, String set		Updates selected Dataset	
uploadFile	String username, String blueprintType, String path, String fileName		Uploads external file	

Revision #2
