# Library APIs

<p></p>

- Add Network Library
- Add SmartTag Library

# Add Network Library

This API could be used to add your created network library using network library workbench, network library will have a .netx extension and any step using the network library will be accessing this particular file.

After selecting this action, you can double click the Accessor which shows options to browse the file and also to make the path absolute or relative.

# Add SmartTag Library

This API is similar to that of Network Library which can be used to browse the SmartTag library created for a target application using SmartTag workbench. This has a .stags extension, and any step that uses the SmartTag library will access this particular file for details.

After selecting this action, you can double click the Accessor which shows options to browse the file and also to make the path absolute or relative.
