

Error: Missing bundle seleniumrc version

Problem

When I try to play my scenario, I see:

Error: Node testnode failing: Missing bundle: Missing bundle seleniumrc version 2.45

Issue

Selenium version mismatch exists.

A component of each scenario are its Resource bundle properties, one of which is the Selenium RC version (seleniumrc).

The Selenium RC version on the test node must match the version specified in the Resource bundle properties (assumes a Selenium RC script type is used)

Resolution

1. On the TestNode machine, navigate to **<utp install path>\TestNode\bundles\seleniumrc**
2. Note the name (version number) of the directory within the **seleniumrc** directory
3. Open an existing scenario in the **Scenario Builder**.
4. Select **Resources**
5. Locate the **seleniumrc** listing in the **Bundles** section
6. Confirm the version box contains the same version number as noted in step 2 (above)

Once the version in the Scenario Builder matches the installed version, save the scenario and run it again.
