

Add Snapshot Evidence in Scenario Editor

Add Snapshot Evidence in Scenario Editor

This page replaces old Designer 2.0 wording with current Scenario Editor guidance. Add snapshot evidence when a screenshot or captured state will help diagnose a failure or prove an important business checkpoint.

When snapshots help

- Before and after a critical action.
- At the first meaningful failure point.
- When validating layout, displayed data, or a confirmation page.
- When troubleshooting intermittent behavior across browsers or Test Nodes.

Good practices

1. Name the step clearly so the snapshot is easy to find in output.
2. Capture only useful checkpoints; too many snapshots make analysis noisy.
3. Keep sensitive customer data out of screenshots when possible.
4. Attach execution output to the related defect or maintenance note.
