

Grant Microphone Permissions for Scenario Editor Tests

Last reviewed: October 2, 2026

Use this article when a Scenario Editor test must interact with a browser workflow that requests microphone access.

What changed in this article

- Replaced generic permission wording with Scenario Editor and browser permission setup guidance.
- Added checks for browser profile, test environment policy, HTTPS requirement, permission persistence, and evidence capture.
- Clarified that production user microphone prompts should not be handled with personal accounts or real user data.

Validation workflow

1. Confirm the test environment is approved to use microphone access and does not capture sensitive audio.
2. Preconfigure the browser profile or test policy so the permission behavior is deterministic.
3. Run the scenario and verify the permission state, browser prompt behavior, and resulting evidence.

Review note: This page now treats microphone access as a controlled browser-permission setup task.
