Handle Validation Failures and Continue Scenario Execution

Use this article when a Scenario Editor test should record a validation failure, continue safely, and leave clear evidence for review.

Validation workflow

1. Decide whether the validation failure is safe to continue past or should stop the scenario immediately.
2. Capture evidence such as message text, screenshot, output log entry, or response payload before continuing.
3. Add cleanup or guard steps so later actions do not depend on a failed state.
