

How to get the downloaded files in test designer?

The solution to this is using a function known as `getDownloadedFiles()`. This particular function is used to get the downloaded files. It can be passed through a variable. This function can be used as shown below:

```
var [] filedownloadedList = getDownloadedFiles(),
```

To get the file path from the downloaded list, use as below:

```
var filepath = fileDownloadedList.getJSONObject(0).getString("path")
```

where “fileDownloadedList” is a variable that has been used to store the downloaded file. This function is fetching the path of the downloaded file and stores it in a variable.

No		Action	Accessor	Value	Descripti...
1		Store	fileDownloadedList	getDownloadedFiles()	store downl...
2		Store	filepath	fileDownloadedList.getJSONObject(0).getString("path")	fetching and...
3		Log	filepath		log the fetch...
