Validation Workbench (Knowledge Base Articles)

Contents

- Validation Workbench

What is the reason for some of the validations not getting triggered even when the validation conditions meet?

Response:

There is a timeout to confirm if the element is present, usually 2 seconds, otherwise, the validation will not get triggered

This is important because we cannot wait indefinitely for the element to appear on the page.

IT is a tradeoff meaning a very small case of validation will not get triggered BUT the speed of the test will not be affected significantly when adding validations. This is a VALID approach in AJAX environment like Browser JS, image as a button not appearing when loading a UI, it is a common case.
