

HAR Knowledge Base Overview

HAR Knowledge Base Overview

Use HAR knowledge base content for maintained HTTP Archive workflows only when HAR capture or replay remains part of the AIQ process.

Recommended guidance

- Keep HAR guidance focused on capture, data handling, replay, and troubleshooting.
- Remove or consolidate duplicate one-off examples.
- Do not include sensitive headers, tokens, cookies, or production payloads.
- Prefer current Service Suite or Scenario Editor guidance when it replaces old HAR workflows.

Validation workflow

1. Confirm whether the HAR workflow is still maintained.
2. Sanitize sensitive request and response data.
3. Validate the HAR in a non-production environment.
4. Document any replacement workflow or migration plan.
