Legacy Firefox HTTPS Localhost Troubleshooting for AIQ

This page is retained as a legacy reference for older Firefox HTTPS localhost issues in AIQ environments.

Validation workflow

1. Confirm the current supported browser path before troubleshooting an older Firefox localhost issue.
2. Verify certificate trust, URL/port, proxy settings, and whether the AIQ service is reachable on localhost.
3. If the issue is Firefox-specific, document the browser version and compare with a supported Chrome/Edge execution path.
