

macOS Required Configurations for AIQ - Duplicate Review

Recommended guidance

This page duplicates the macOS required configuration topic. Keep one authoritative macOS configuration article and consolidate any unique current details into that page.

Consolidation checklist

- Compare this article with the install-guide macOS configuration page.
- Move unique supported content into the authoritative article.
- Remove old screenshots, old product names, and unsupported security-bypass wording.
- Delete or redirect this duplicate after content owner review.

Current recommendation

Use the primary macOS configuration guide for current AIQ setup. Retain this page only if it is needed temporarily during migration cleanup.
